

What is claimed is:

1. An underwater electrical generator, comprising:
an electrical generator;

a first cylinder having a first water inlet and a first
water outlet;

5 means for controlling water flow through said first
water inlet and said first water outlet;

a first piston reciprocally mounted in said first
cylinder having a first rod coupled to said generator for
turning said generator as said first rod extends toward said
10 generator;

a second cylinder having a second water inlet and a
second water outlet;

means for controlling water flow through said second
water inlet and said second water outlet;

15 a second piston reciprocally mounted in said first
cylinder having a second rod coupled to said generator for
turning said generator as said second rod extends toward
said generator.
